BT1. interface Mail → method send mail (), log ()

class MailImpl → implements mail

```
Interface mail {
```

```
    void sendmail ();
```

```
}
```

```
    void log ();
```

```
class mailImpl implements mail {
```

```
    @Override
```

```
    void sendmail () {
```

```
        System.out.println (" gửi ... ");
```

```
}
```

```
    @Override log() void log () {
```

```
        System.out.println (" Nhật ký ... ");
```

```
}
```

```
}
```

```
class main {
```

```
    public static void main (String [] args) {
```

```
        Send MailImpl m = new MailImpl ();
```

```
        m.sendmail ();
```

```
        m.log ();
```

```
}
```

```
}
```

BT3:

```
class Abstract class PTDC {  
    protected String Receipt;  
    protected String hangSanXuat;  
    String layTenHangSanXuat();  
    void batdau();
